

AUTOMATE REPORT VALIDATION AND FIND PROBLEMS **100X FASTER**

ACTIONABLE, REAL-TIME INSIGHTS ABOUT YOUR BI LANDSCAPE

One of the biggest setbacks to any business intelligence program is the dissemination of **WRONG DATA** often caused by ineffective report testing or poor visibility into change control processes.

THE FOLLOWING ARE THE **TOP 3 COMPLAINTS HEARD** FROM THE BI COMMUNITY

1

"The numbers are no good!"
CFO

2

"Who modified this report?"
BI Developer

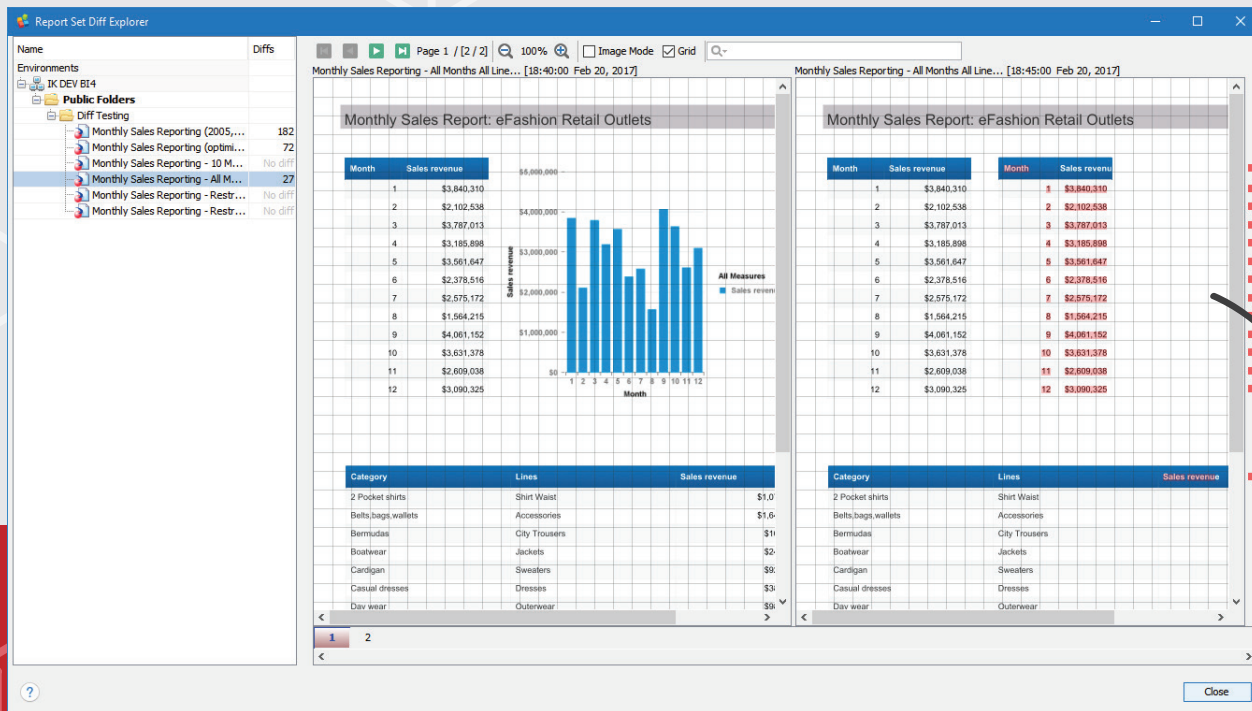

3

"Why is it displaying different results from my Excel spreadsheet?"
HR Manager

DATA DRIVEN CULTURES CAN ONLY EXIST WHEN USERS BELIEVE THAT THE DATA IS CORRECT

THE ANSWER
MetaMiner Enterprise's ARV (Automated Report Validation) capability identifies changes between any two sets of report output data and metadata and provides automated notifications to subscribing users, thus eliminating hundreds of wasted hours while dramatically increasing the quality of the data verification process.

FEATURES

Compare Web Intelligence, Crystal Report, Lumira and Design Studio Outputs

Use Smart Triggers to automate report testing based on business rules (e.g. universe changes)

Regain trust of executive leadership and inspire BI user adoption
